"Flatlift Slimline Ceiling TV Lift" works via remote control – from the room ceiling

Ultra-flat Slimline TV ceiling lift series by Flatlift available immediately – with emergency electricity supply and surge protection

65" Flatlift Slimline
Neatly integrated into the ceiling

Worms, 19.02.2008 – With the Slimline TV ceiling lift series, Flatlift (www.flatlift.net) offers an ultra-flat product series which enables the integration of flat-screen TVs into room ceilings. Via remote control, the television attached to a flap then pivots downward by 90 degrees – without making a sound. After use, the device "disappears" just as quickly and simply (plus, nearly invisibly) in the ceiling, which saves space. **The special highlight of this feature:** the complete frame which carries the television (and contains the mechanical components in their entirety), is only 20 cm high when retracted, and can be assembled – for a most appealing appearance – on or under the plasterboard. With that, the Flatlift Slimline products are among **the world's flattest TV ceiling lifts** - and hardly noticeable when retracted.

In order to ensure a particular level of safety, all devices in the Slimline series are also equipped with a 230V emergency electricity supply and lightning protection – for the flat-screen TV itself, as well as for the TV lift (effective immediately). Aside from that, surge-protection insurance for connected devices is included (in the amount of €125,000.00, so that also more expensive flat-screen televisions are safeguarded.

In addition, the five-year full guarantee - and following the elapse of this period, a lifelong repair-costs limit – ensure you **no worries whatsoever**. In the event of any necessary repairs, even many years after the purchase, merely a maximum of 33% of the price of a new device is billed to you - Flatlift takes care of the rest for the customer.

The Slimline ceiling lift is available in three different versions and suitable for flat-screen televisions with a size of up to 65 inches (screen diagonal approx. 165 cm).

The system is also available for different voltages (12V/24V/230V), so that the TV lifts can then be installed and operated on boats or in "campmobiles".

"Particularly our customers with a highly sophisticated sense of aesthetics consider it important that the television not dominate the furnishings in a room, even if it is in fact a rather high-quality device in the technical respect", as Sascha Rissel, the general manager of the Flatlift GmbH, explains. "In that case, the Flatlift Slimline ceiling lift is a quite interesting solution, since the television is practically invisible when not in use, but there are no obstacles to people enjoying the television whenever they please. The effect when the closed device is swivelled out at the touch of a button is also something very special, and generates enthusiasm on the part of the owner and his or her guests."
